

# COST-EFFECTIVE REAGENTS FOR HIGH-QUALITY TRACE METALS ANALYSIS

The duoPUR allows you to purify reagent grade acid for trace metals analysis at a fraction of the price. With its two purification modules, distillation capacity can be doubled, ensuring a continuous supply of ultrapure reagents.

90% COST SAVING

HIGH PRODUCTIVITY

ON-DEMAND ACID PURIFICATION

**AUTOMATIC & SAFE** 

## SUBBOILING TECHNOLOGY

Sub-boiling distillation has proven to be the best and most cost-effective method of acid purification. While conventional distillation boils the acid and generates an aerosol that can contain contaminants from the starting reagent, sub-boiling distillation prevents the formation of spray or droplets and yields very high purity acid.

Conventional vaporization vs sub-boiling

Schematic of a sub-boiling distillation system with duoPUR

## **2X PURIFICATION CAPACITY**

The duoPUR provides double distillation capacity for 1 reagent or simultaneous purification of two different reagents. This is made possible with two quartz distillation units, each equipped with two infared heating elements. The water cooling allows fast condensation of the ultrapure acid into the collection bottle. With the duoPUR you can rely on up to 400 mL of ultrapure acid per hour.

### GREAT RETURN ON INVESTMENT

In trace metals analysis you often need to use expensive high-purity acids. Applying the duoPUR, with subboiling technology, the cost of reagents can be reduced up to 90%, efficiently purifying reagent grade acids to provide ultrapure acids at the desired quality.

### **AUTOMATIC & SAFE**

Simply select a stored method and press "START" on the touch screen terminal, to begin the sub-boiling purification process. Safety and ease of use are ensured by the automatic loading / draining module which minimizes exposure to any acid.
